Parts of a Bird - Nomenclature Cards

Control Cards (picture + label) - Cut along dotted lines

Bird

The whole bird

Beak

Used for eating, preening, and nest-building

Wing

Feathered limb for flight and balance

Tail Feathers

Act as a rudder and brake during flight

Feet

Adapted for perching, swimming, or catching prey

Breast

Houses powerful flight muscles

Eye

Excellent vision; many birds see ultraviolet light

Crown

Top of the head, often brightly colored

Leg

Supports the bird when standing or walking
